LIMITS

A function has a **limit** at $x=a$ if there exists a value b such that $f(x)$ converges to b when x approaches a .

$$\lim_{x \rightarrow a} f(x) = b$$

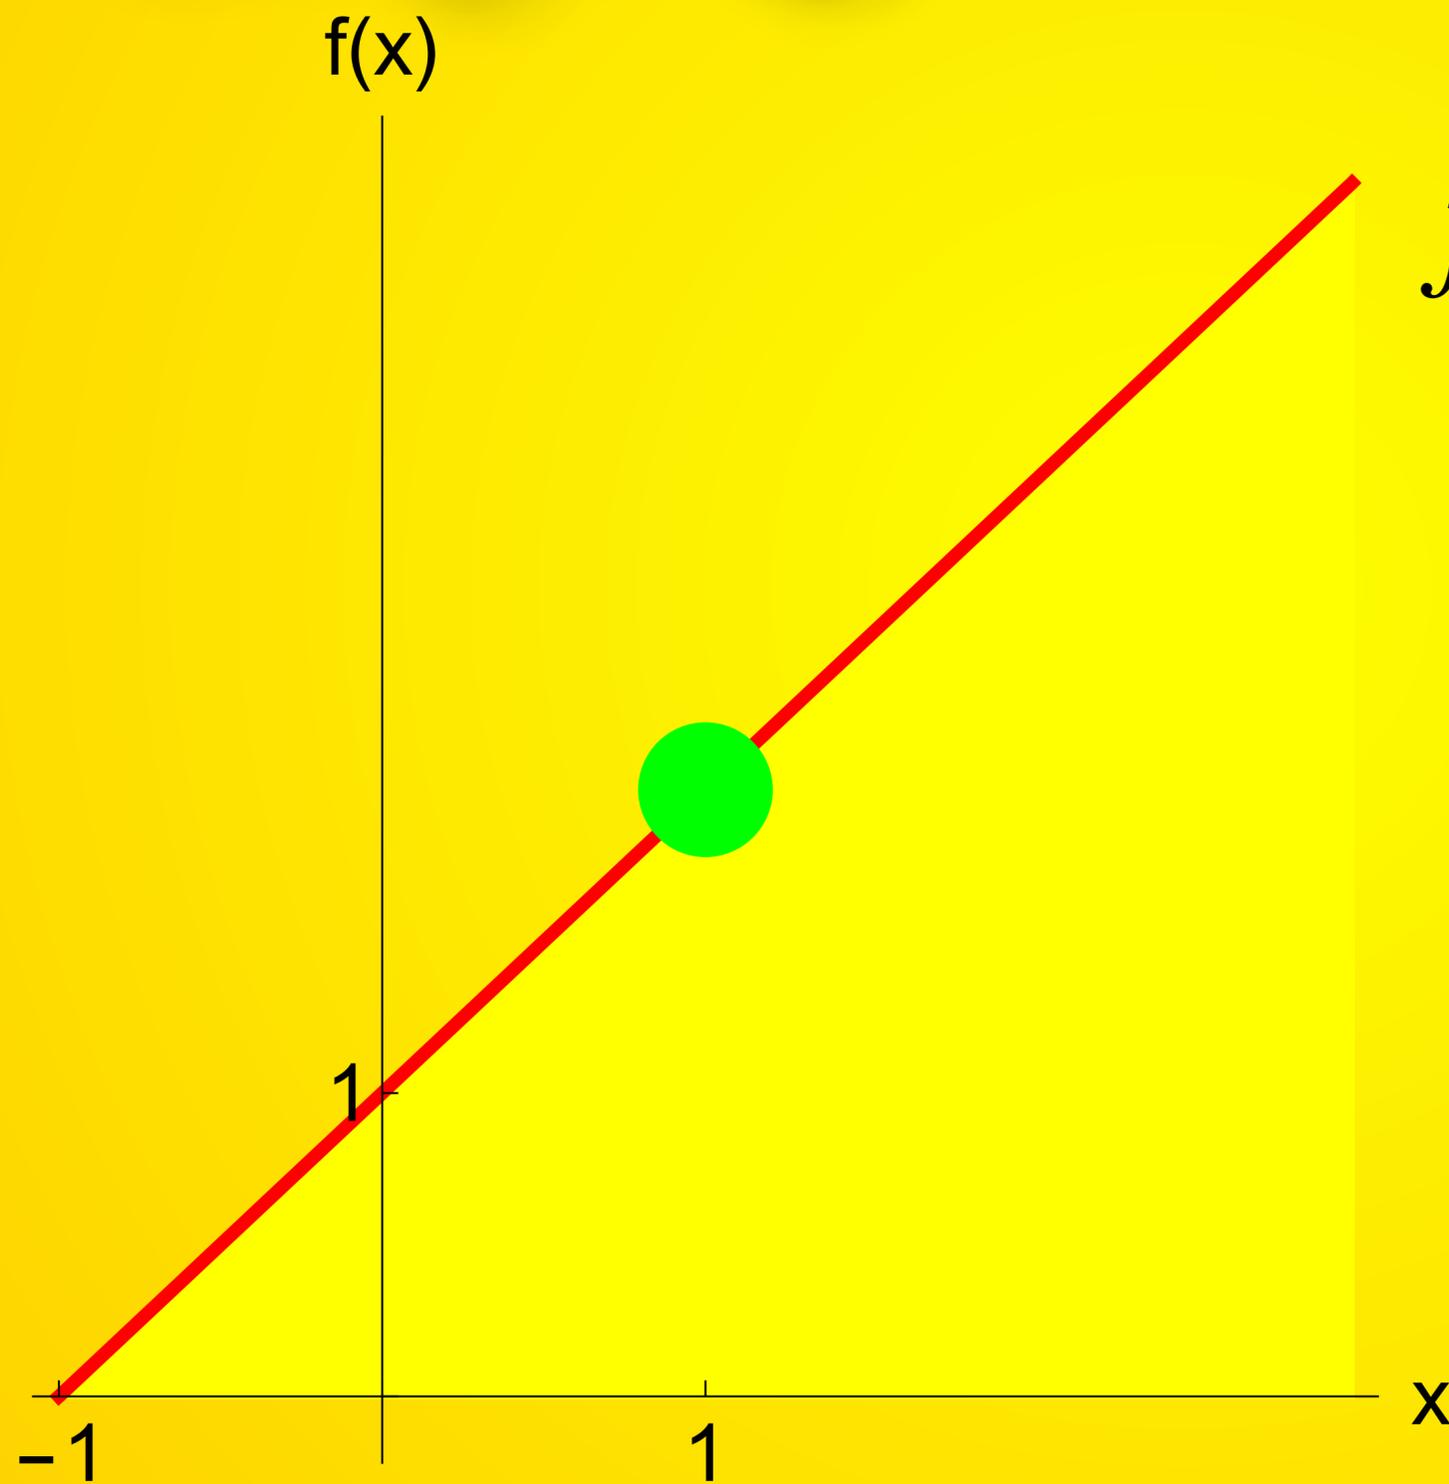

The limit needs to be **finite**, not like with $f(x)=1/x$ at $a=0$

$$\lim_{x \rightarrow a^+} f(x) = b \quad \lim_{x \rightarrow a^-} f(x) = b$$

The limit has to be the same from **both sides**, not like $f(x)=x/|x|$.

We need convergence to a **unique** value, not like in $f(x)=\sin(1/x)$.

BROKEN FUNCTIONS

$$f(x) = \frac{x^2 - 1}{x - 1}$$

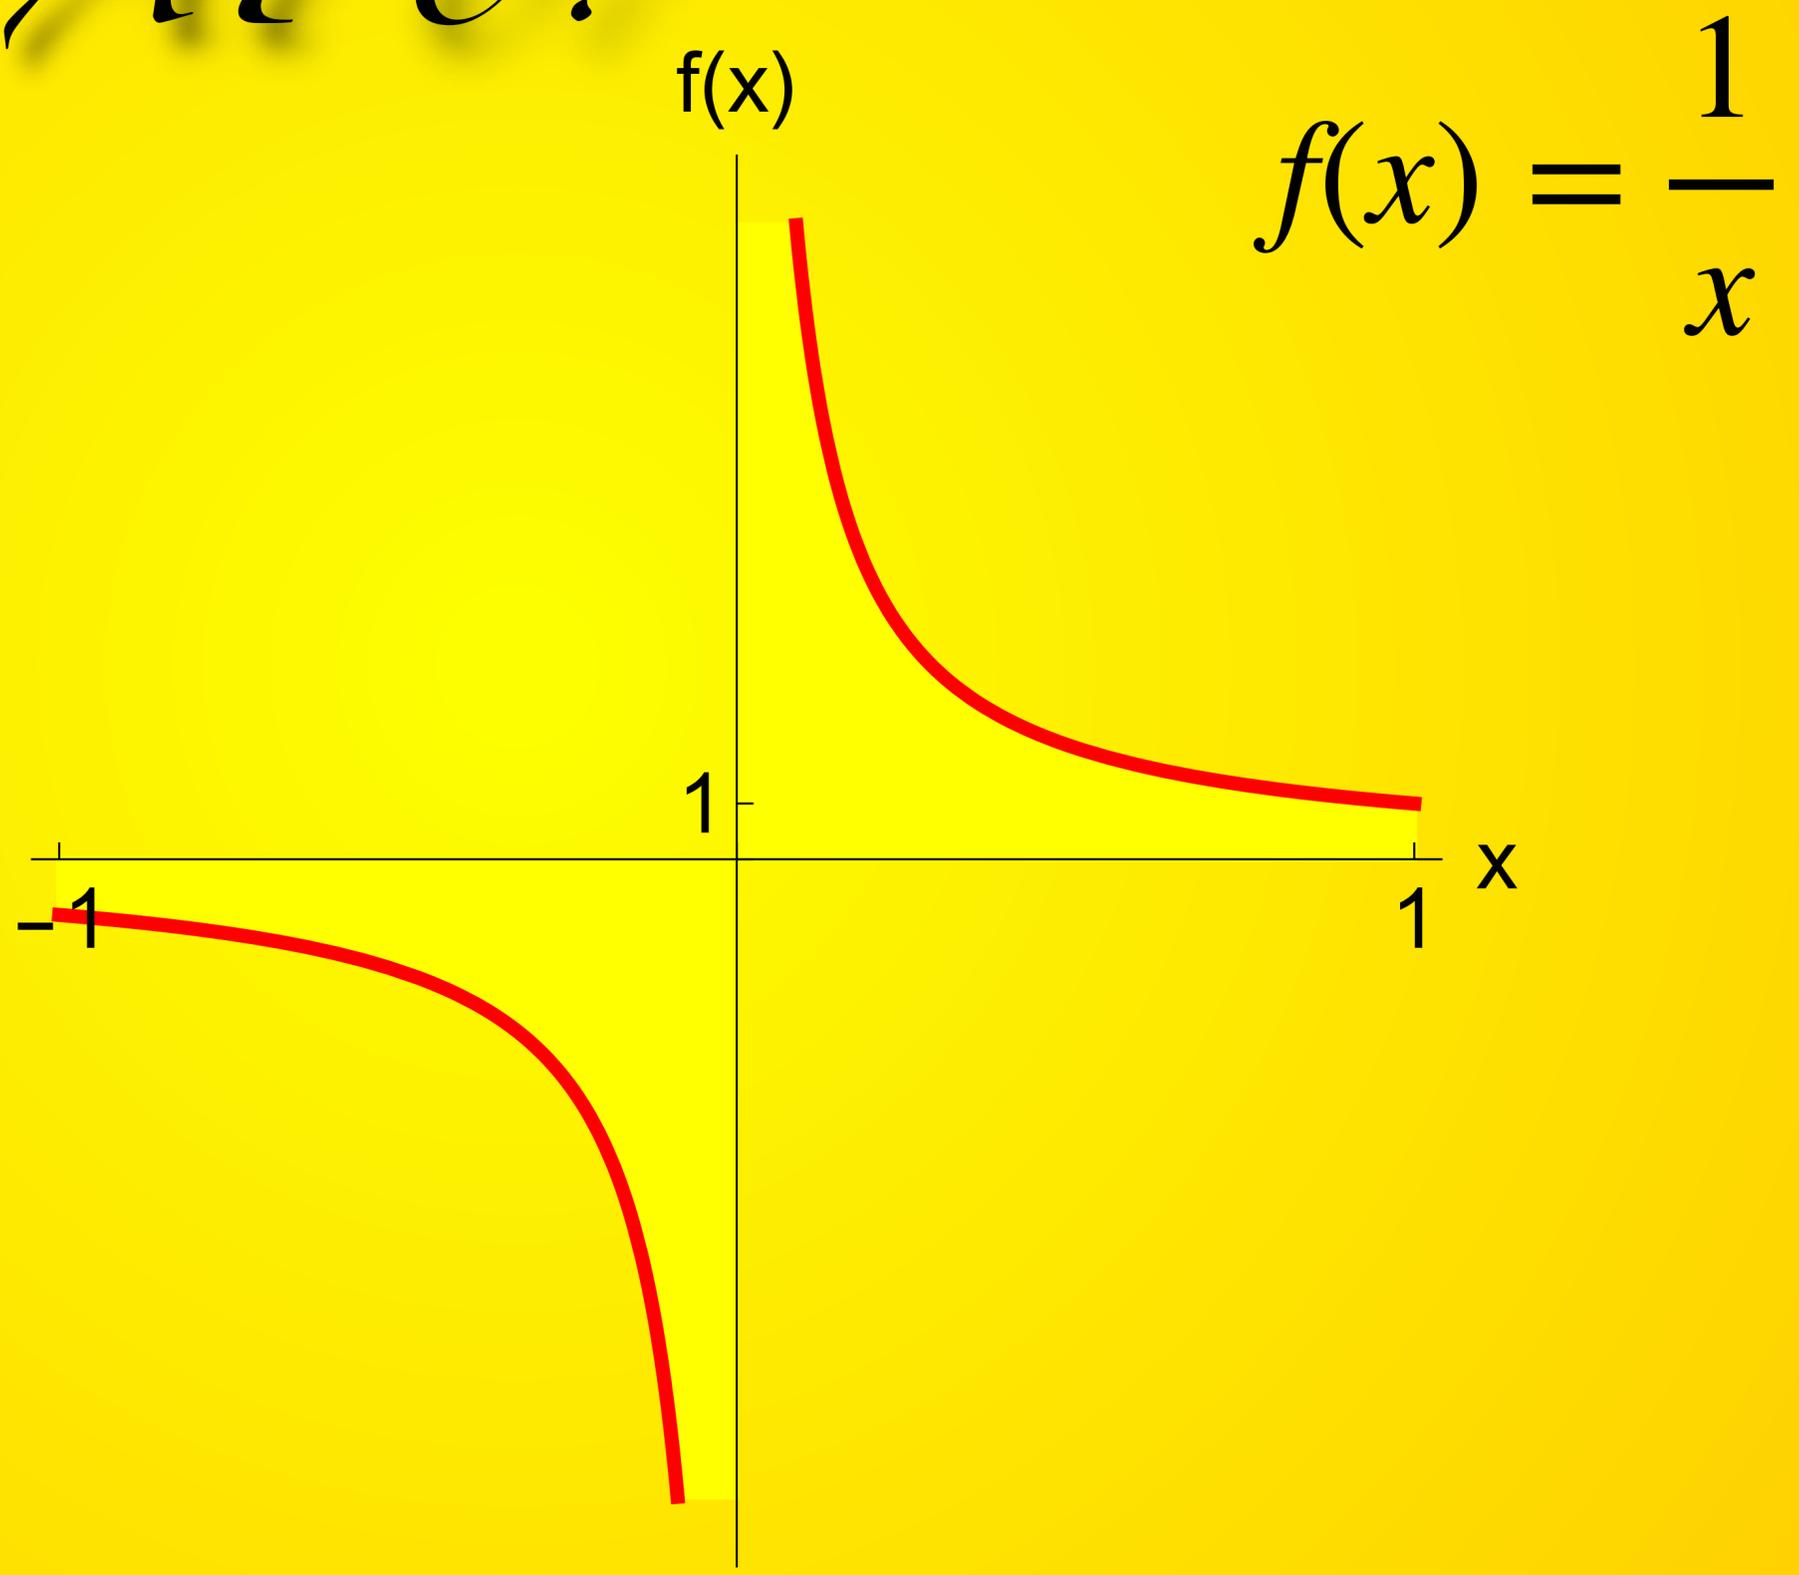

f is not defined at $x=1$ but we can assign a value to $x=1$.

POLL

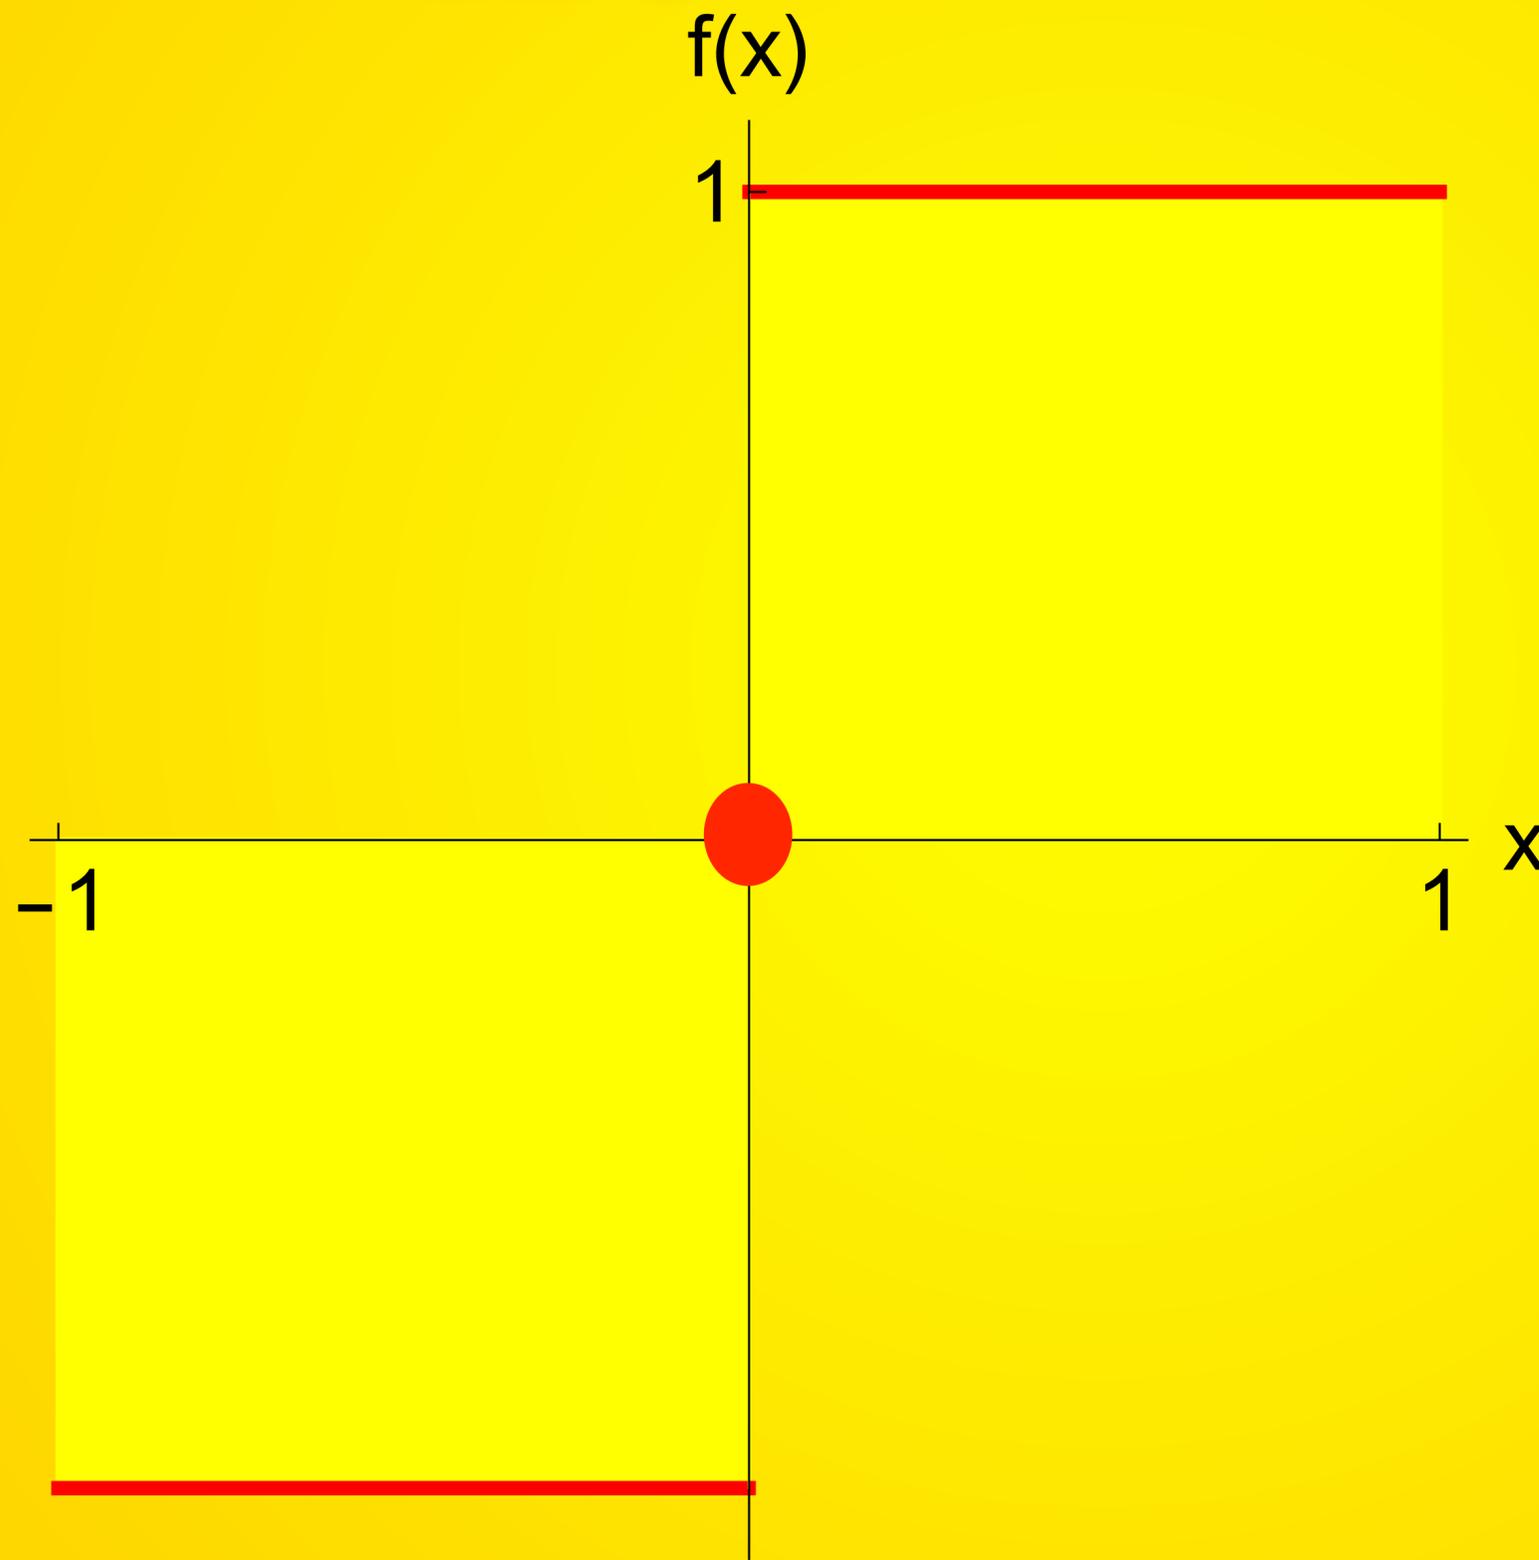

What is:

$$\lim_{x \rightarrow 2} \frac{(x^2 - 5x + 6)x}{(x - 2)}$$

LIMIT AT 0?

LIMIT AT 0?

$$f(x) = \text{sign}(x)$$

EXAMPLES

a)

$$\lim_{x \rightarrow -1} \frac{x^4 - 1}{x + 1}$$

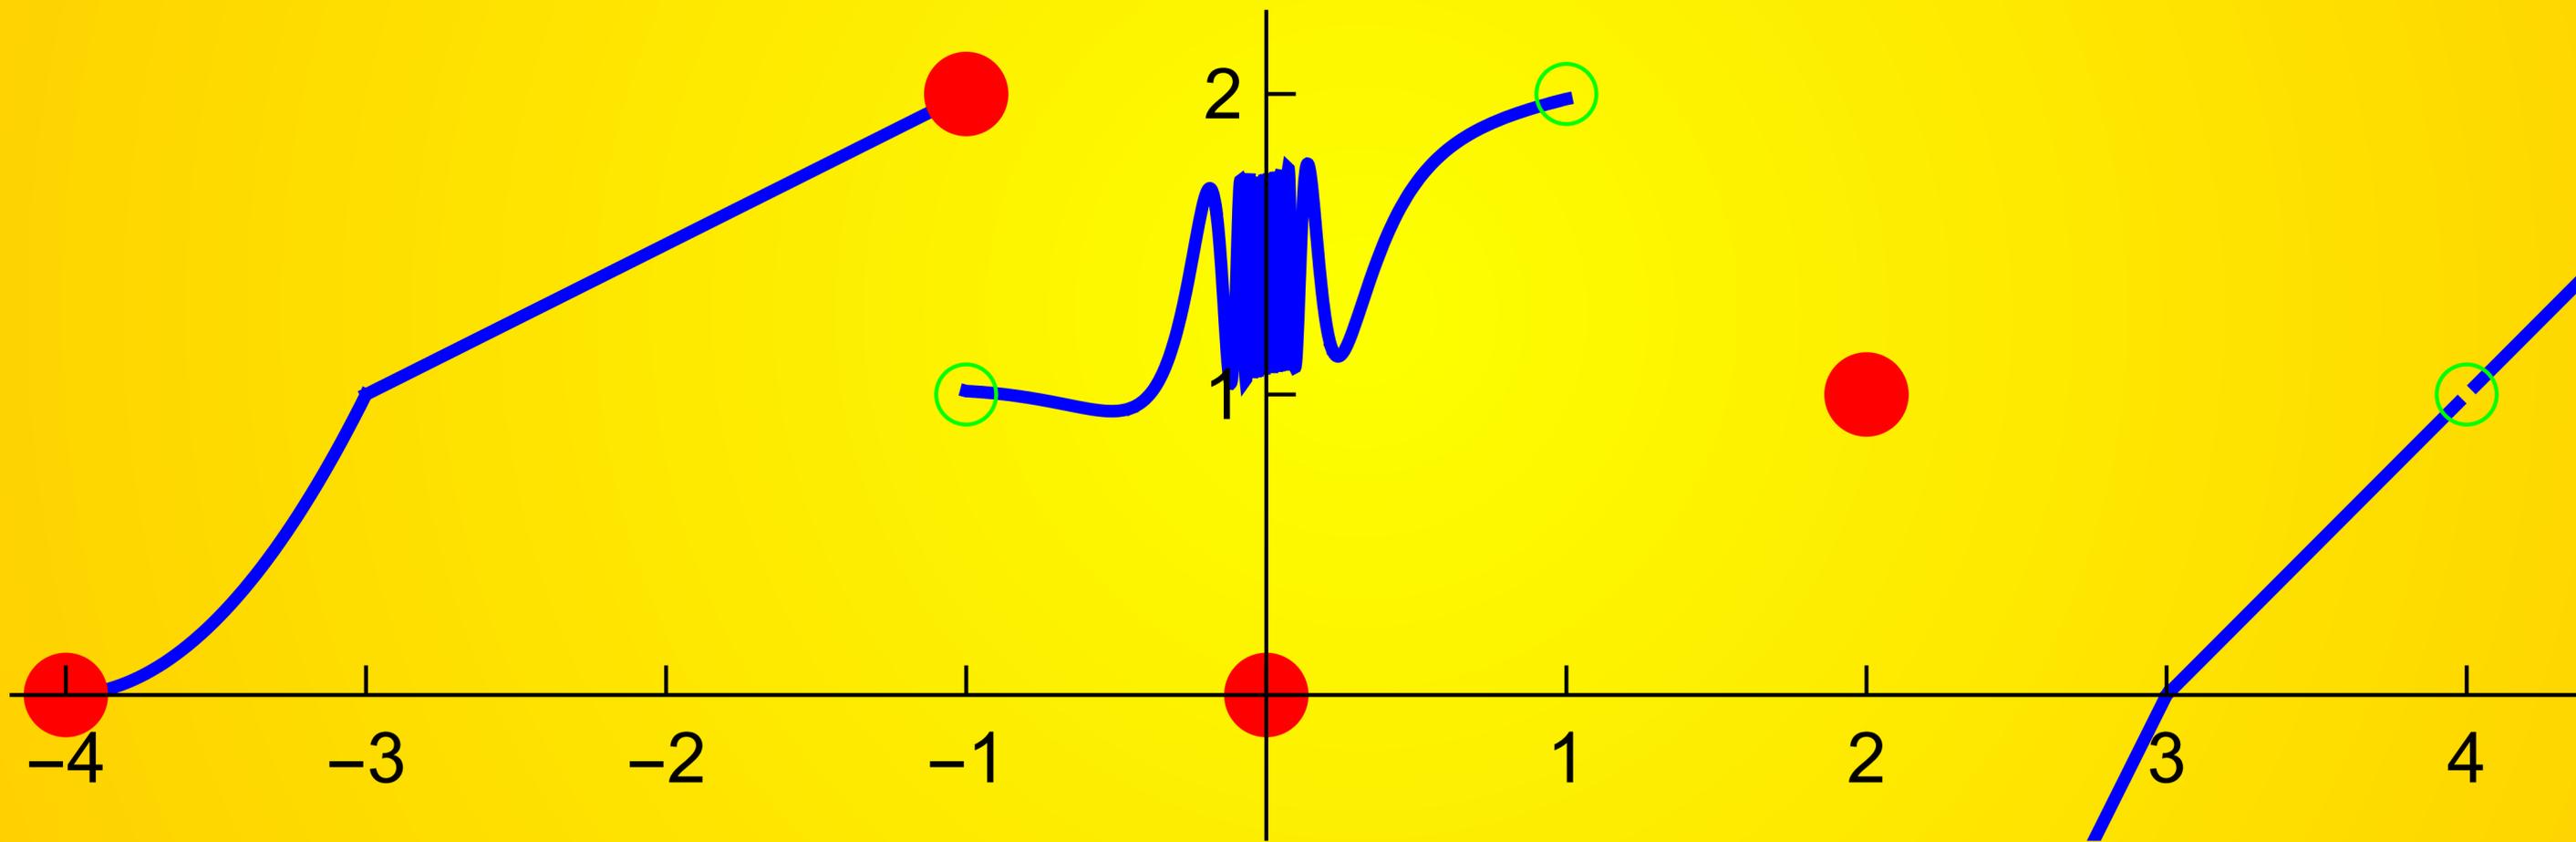

b)

$$\lim_{x \rightarrow 0} \frac{\sin(x)^3 - 1}{\sin(x) - 1}$$

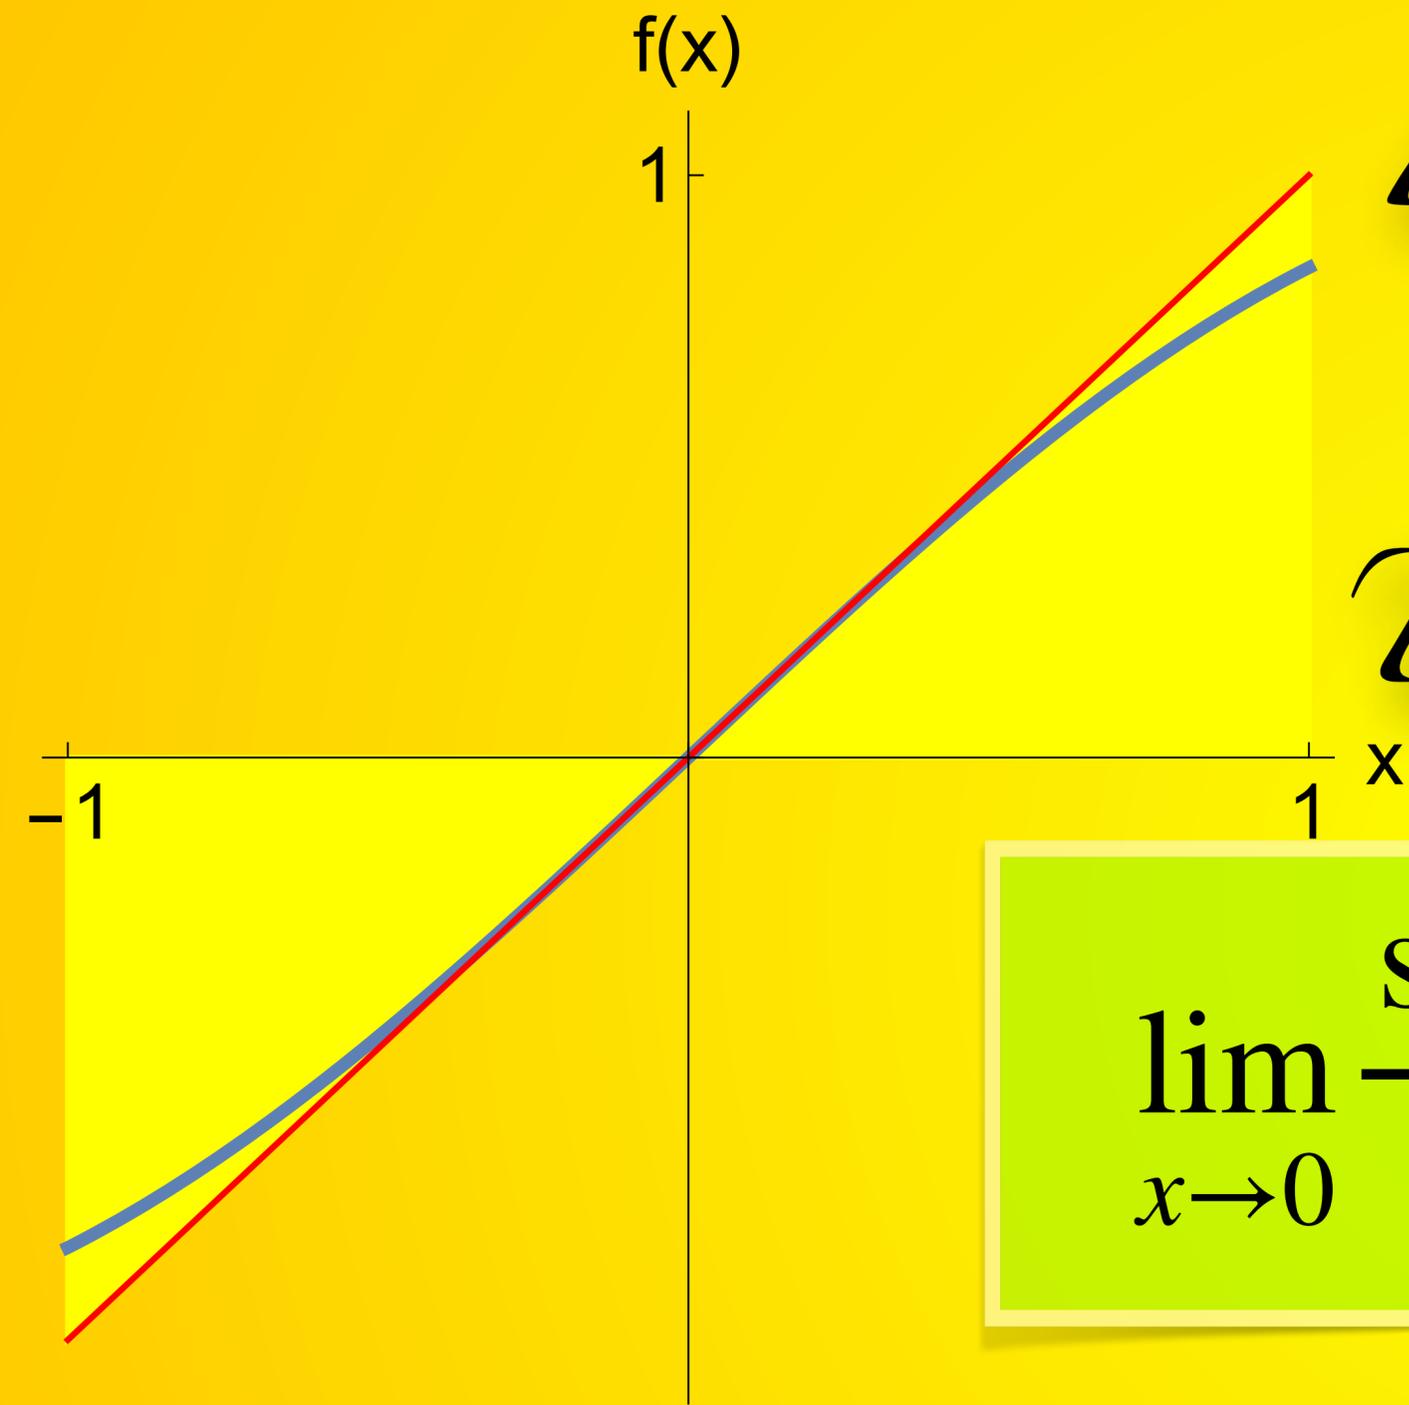

c)

$$\lim_{x \rightarrow 0} \frac{\tan(x)}{\sin(x)}$$

LIMITS

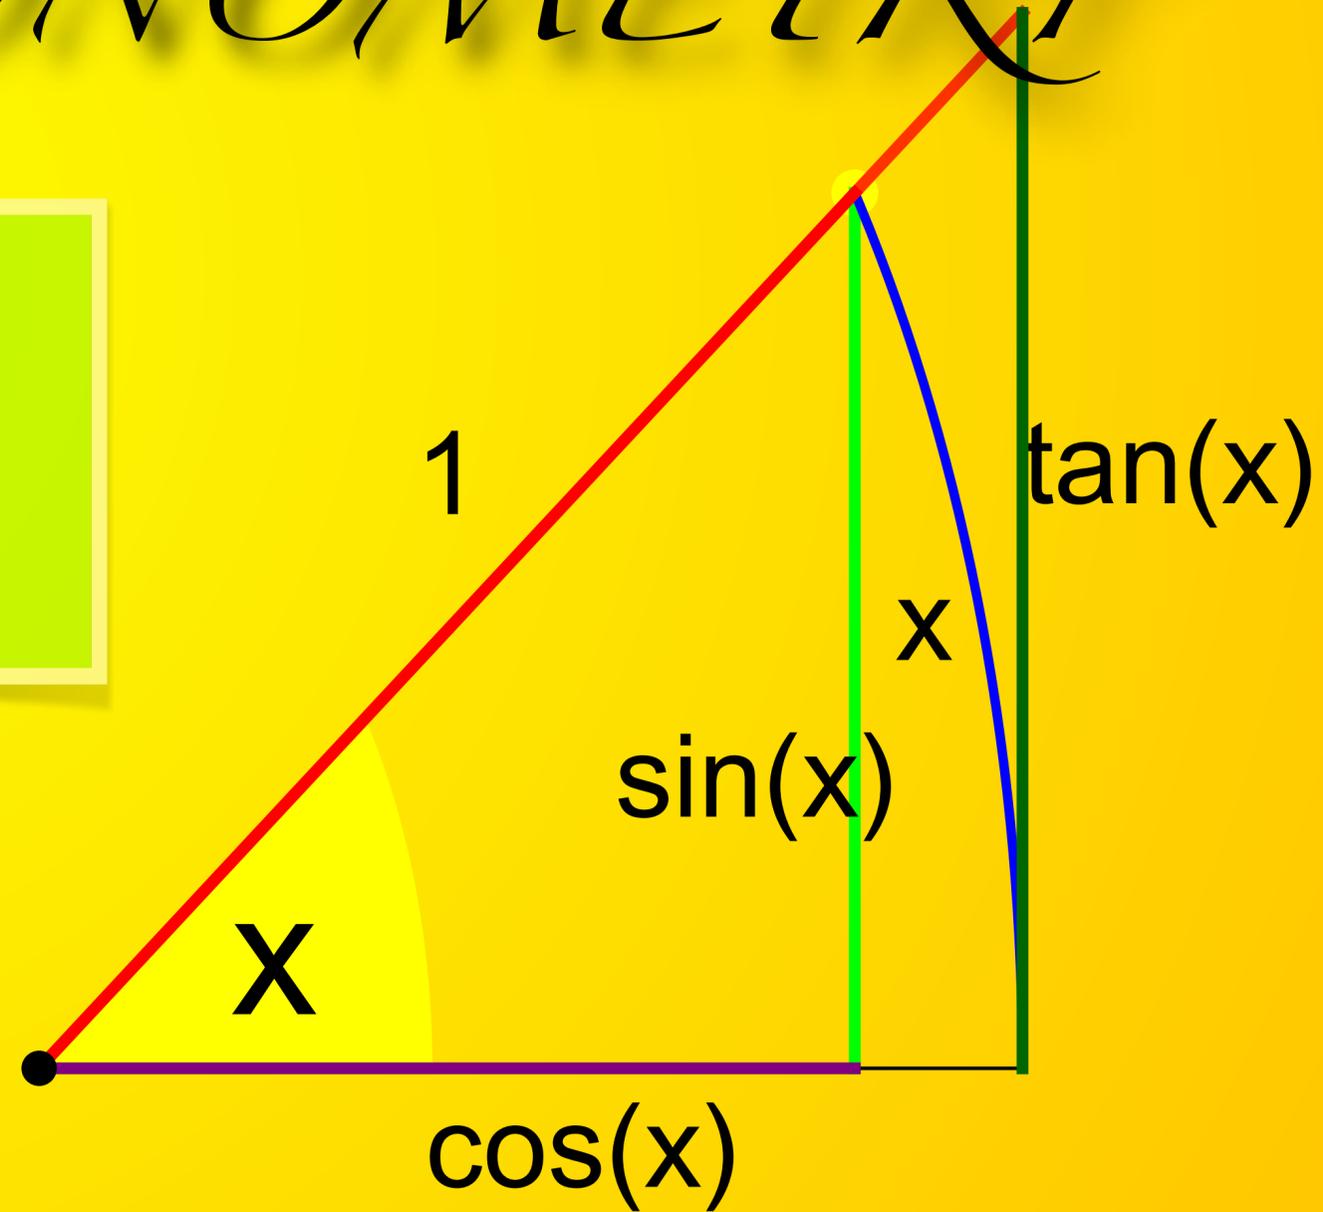

FUNDAMENTAL THEOREM TRIGONOMETRY

$$\lim_{x \rightarrow 0} \frac{\sin(x)}{x} = 1$$

$$1 = \frac{\sin x}{\sin x} \leq \frac{x}{\sin x} \leq \frac{\tan(x)}{\sin(x)} = \frac{1}{\cos(x)}$$

EXAMPLES

a)

$$\lim_{x \rightarrow 0} \frac{5x}{\sin(7x)}$$

b)

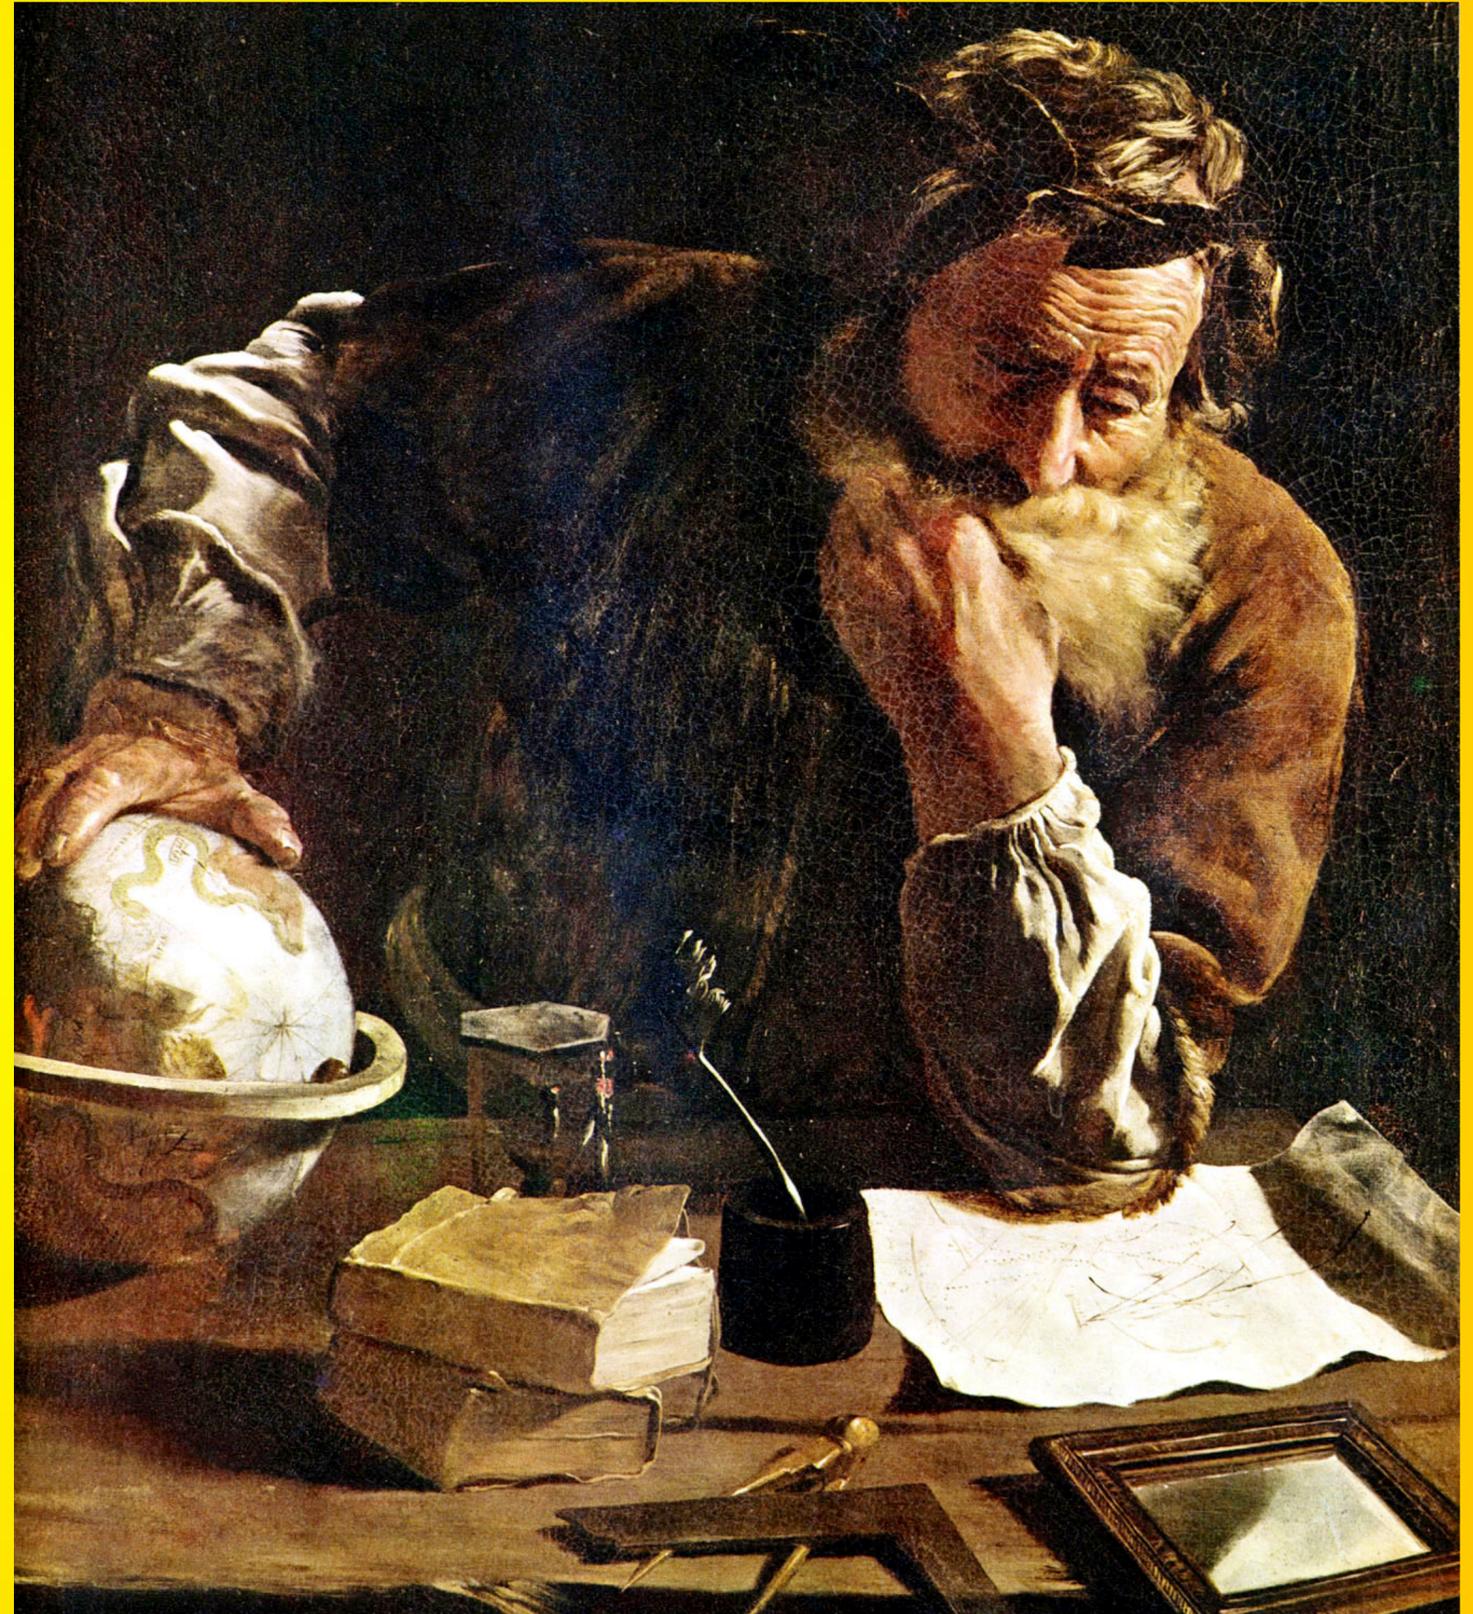

$$\lim_{x \rightarrow 0} \frac{\sin^2(x^3)}{x^6}$$

c)

$$\lim_{x \rightarrow 0} \frac{5x(x^2 - 1)}{\sin(7x)(x - 1)}$$

ARCHIMEDES

Archimedes
288 BC - 212 BC

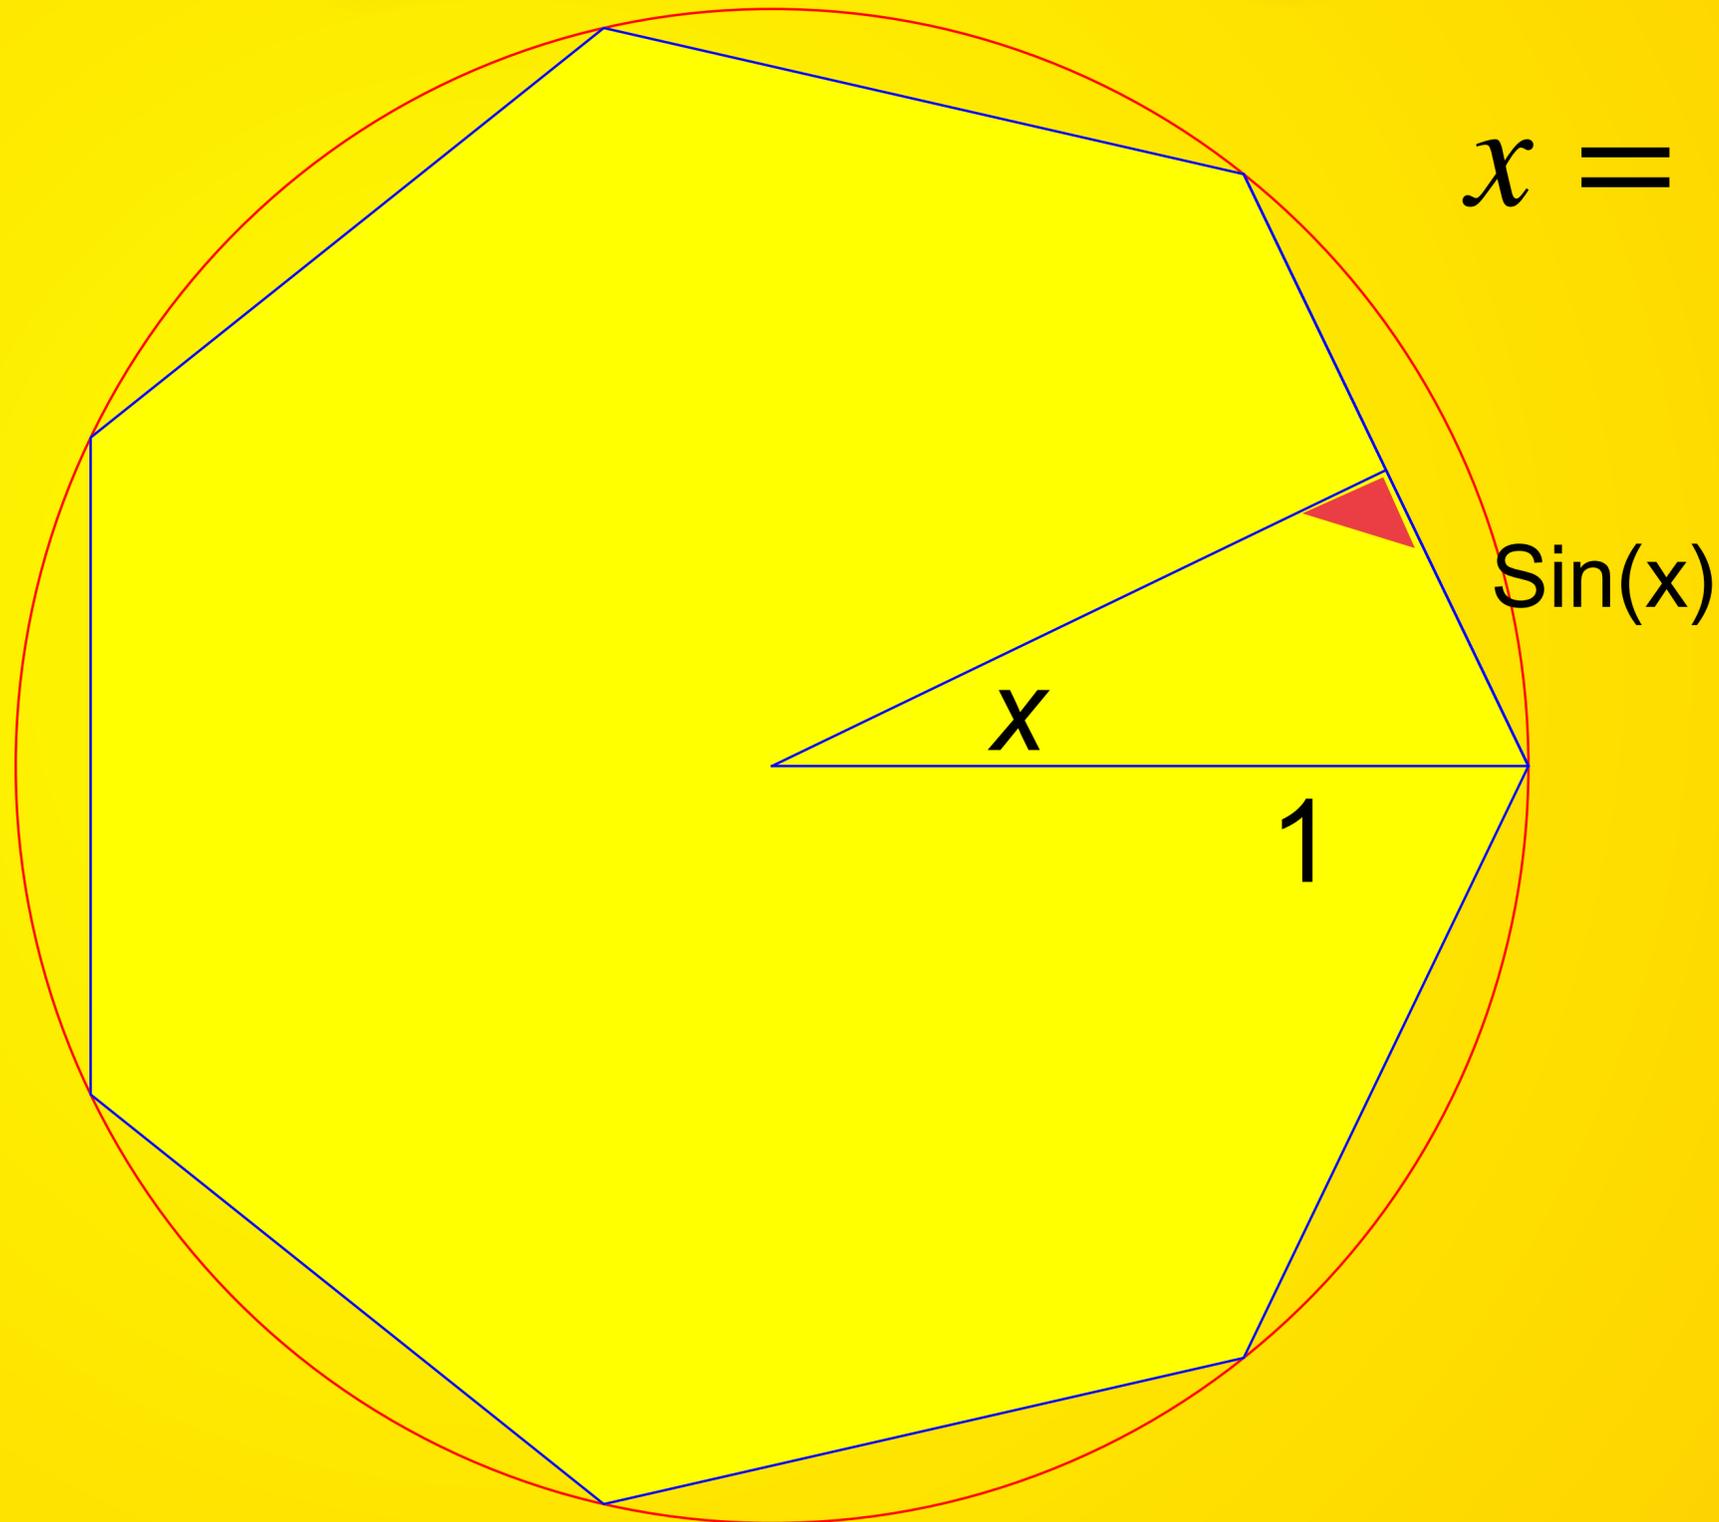

CIRCUMFERENCE

$$\frac{\sin(x)}{x} = \frac{\sin(2\pi/n)}{2\pi/n} \rightarrow 1$$

SO:

$$n \sin(2\pi/n) \rightarrow 2\pi$$

$$x = 2\pi/n$$

JAM

a)

$$\lim_{x \rightarrow 0} \frac{e^{2x} - 1}{e^x - 1}$$

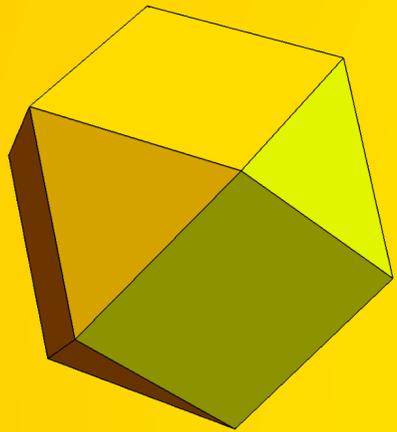

b)

$$\lim_{x \rightarrow 0} \frac{\sin(\sin(x))}{\sin(x)}$$

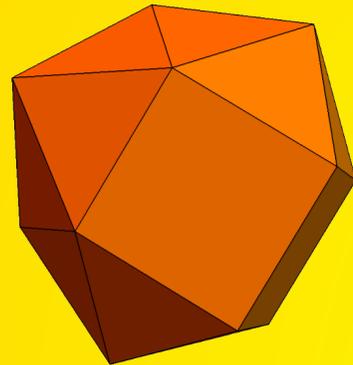

c)

$$\lim_{x \rightarrow 1} \frac{\log^2(x)}{\log(x)}$$
