MATH 99R PROBLEM SET 7

Due at 9am on Thursday, October 29.

Problems (3)–(5) were taken from Dinakar Ramakrishnan and Robert Valenza’s *Fourier Analysis on Number Fields*.

Throughout, let $F$ be a number field.

1. Let $G$ be a locally compact topological group, and let $m$ be a left Haar measure on $G$. Prove that, for any nonempty open subset $U \subseteq G$, we have $m(U) > 0$.

2. Show that the usual topology on $\mathbb{A}_F^\times$ is strictly finer than the subspace topology from identifying it as the unit group of $\mathbb{A}_F$.

3. Prove that the map $\mathbb{A}_F^\times \to \mathbb{A}_F^2$ given by $x \mapsto (x, x^{-1})$ is a homeomorphism onto its image.

4. Show that $F^\times$ is discrete in $\mathbb{A}_F^\times$.

5. Let $x$ be in $F$. Prove that $\|x\|_v = 1$ for all $v$ in $M_F$ if and only if $x$ is a root of unity.
